LETTER OF REFERENCE

We would like to highly recommend Simex Company as a professional supplier of industrial automation.

In 2014 we bought theirs multichannel controller/ data recorder MultiCon CMC-141. This advanced device is excellent for our requiring applications.

On January 2014 we have implemented 16 pieces of MultiCon on our customer's vessels in the engine room (on the diesel generator). This device is designed as diesel generator exhaust gases temperature monitoring system.

The application described above after using MultiCon works perfectly even in harsh environment (high vibrations and temperature).

That is why we can recommend both series MultiCon, as well as Simex Company for professional and individual approaches to the client.

We are looking forward for future cooperation with Simex Company.
